## WHAT IS INFLATABLE BOAT?

Inflatable boats take up as much space as a piece of luggage when deflated, which means they can be stored virtually anywhere. Imagine taking your boat out of the closet, putting it in your trunk, leaving your home or apartment, and heading to the water. Inflation takes mere minutes, and then you are ready for a full day of fishing, fun, and exploration by relaxing paddle or exhilarating speeds by motor. Best of all, at the end of the day simply let the air out, roll up your boat and store until the next time.

If you dream of getting on the water, but have found the hassle, costs, and inconveniences of traditional boating have kept you from your water based ambitions, SATURN is the answer to any and all of your perceived obstacles. We have inflatable boats, paddle boards, fishing boats, and even our own invention, the KaBoat. These are not toys, but heavy-duty, commercial grade watercraft of the highest quality in craftsmanship. Easily stored when deflated, easily adored when inflated, these boats are a fraction of the costs of a traditional boat. We want you to blow up your boat, without blowing your budget.
