To pair the remote control with the battery box, first insert the waterproof power cable connector into the output port of the battery, following the arrow direction until it locks in place automatically. Turn on the power switch on the battery box, but do not attach the magnetic emergency safety lanyard string yet.

Next, press and hold the red STOP button on the remote control for more than 5 seconds. Then press the R (Reverse) button on the remote control four times, holding each press for at least 1 second.

After completing this sequence, attach the magnetic emergency safety lanyard string to the battery box. You should now be able to control the eFin using the newly paired remote control.

Do not press any other remote controls or turn on additional battery boxes during this process. Each remote control must be paired with only one battery box.
